## PROJECT DESCRIPTION

### EDI Gateway (Electronic Data Interchange) (04/19 - P)

- EDI provides safe reliable, secure and established method of exchanging data minimizing the human error.
- Development of infrastructure for file processing to support various application.
- Infrastructures development includes various WTX maps, Shell scripts and C-codes.
- ANSI X12 and HIPPA compliance is followed as per the standards. Working with the file formats such as X12, flat, XM, JSON etc.

### WebSphere Transformation Extender (ITX) (04/2019 -P)

- Requirement gathering for various projects for building of maps to facilitate EDI transformations.
- Interaction with client and vendors for understanding their needs and issues and developing maps or transformation tools for vendor.
- Development of WTX maps that are used in Business Process for file manipulation and processing.
- Deployment and testing of WTX maps through DevOps CI/CD methodologies in testing and Production environment.

### UNIX ADMIN:

Production and QA operation (05/2019 - P)

- Managing production server, users and files.
- Solving various issues related to memory management, space issues.
- Creating users and groups.
- Enhancing various tools so that manual work can be converted to automated process through shell scripting.
- Monitoring server processes and network connections.
- Using Kanban to handle the production support work.

### Personal Project (PYTHON, Frontend Web development):

- Server administration: - Creating multiple machines and connecting them to a network and managing users using LDAP.
- Technology used: Linux, Hyper V and PfSense.
- Constantly a part of Infosys coding programs.
- Solving various coding challenges in various websites like LEETCODE.
- Started Local freelancing for website building.
- Building a website for Restaurant and Bike repair shop as template for my freelancing gimmick
- Please check my git hub repository which contains a compilation of my work.
